

LAND O LAKES®
COW'S MATCH®
WarmFront® PB
BOV DBZ
MEDICATED
DAIRY HERD & BEEF CALF
MILK REPLACER

For the control of coccidiosis caused by *Eimeria bovis* and *Eimeria zuernii* in replacement calves.

ACTIVE DRUG INGREDIENTS

Lasalocid (as lasalocid sodium) 60 gm/ton
 (30 mg/lb)

For preventing the development of house, stable, face, and horn fly larvae in the manure of treated calves.

ACTIVE INGREDIENTS

Diffubenzuron* 9.1 gm/ton
 *ClariFly® brand of diffubenzuron (4.55 mg/lb)

GUARANTEED ANALYSIS

Crude Protein, not less than 28.0%
 Crude Fat, not less than 10.0%
 Crude Fiber, not more than 0.20%
 Calcium (Ca), not less than 0.75%
 Calcium (Ca), not more than 1.25%
 Sodium (Na), not more than 1.25%

FULL POTENTIAL CALF FEEDING AND MANAGEMENT PROGRAM

Cow's Match WarmFront calf milk replacer should be fed along with a specific calf starter designed for full potential feeding. Calf to calf variations such as calf weight and health must be considered in implementing this program. Consult with your feed specialist for specific feeding and management recommendations to match with your calf performance goals and expectations.

Manufactured By:

Land O'Lakes Animal Milk Products Co.
 SHOREVIEW, MN 55126-2910

084

Net Weight 50 LB (22.68 kg)

WARNING: Do not add other sources of lasalocid to this milk replacer solution!

MIXING DIRECTIONS

USE ONLY LOW SODIUM (<50 ppm) water for mixing and feeding! Powder should be weighed for precision and best calf performance.

5 Gallon Mix: While stirring, mix 6.25 lbs of milk replacer powder in 110-120°F water and bring final solution to 5 gallons. Feed according to table below.

Individual Calf (Large Breeds (120 to 165 lb body weight))
NOTE: ALWAYS offer free choice LOW SODIUM (<50 ppm) water. While stirring, pour milk replacer powder into 110-120°F water and bring to final solution. Mix thoroughly and feed as directed.

	Milk Replacer Powder	Final Solution	Feeding*
Week 1	0.94 lbs (15 oz)	3 quarts	2x daily
Week 2** to Weaning	1.25 lbs (20 oz)	4 quarts	2x daily
Week of Weaning	1.25 lbs (20 oz)	4 quarts	1x daily

Wean only if calf is eating at least 2 lbs for 3 consecutive days.
 *For 3x feeding use 2/3 the amount of powder and solution indicated.
 **When under heat or other types of stress, delay this increase until week 3.

Mixed and fed as above, this product provides 45 milligrams of lasalocid per 100 lb of body weight. This resulting mix should be fed during periods of coccidiosis exposure or when experience indicates coccidiosis is likely to be a problem and to prevent the development of house flies, stable flies, face flies and horn flies in the manure of treated beef and dairy calves. Start feeding ClariFly early in the spring, 30 days before flies begin to appear, and continue feeding throughout the summer and into the fall until cold weather restricts fly activity. In some cases, supplemental fly control measures may be needed in and around barns and hutches to control adult house and stable flies which can breed in other decaying, organic matter or silage in the area, or that migrate in from other locations.

GENERAL RECOMMENDATIONS

1. Feed newborn calves 3 quarts of high quality warm colostrum via nipple bottle within 1 hour of birth and repeat 12 hours later (or) feed 4 quarts of high quality warm colostrum by esophageal feeder within 1 hour of birth and repeat 12 hours later via nipple bottle offering as much as they will consume.
2. Consult with your veterinarian on a dry cow and calf vaccination program including but not limited to E. Coli, rotavirus and corona virus, clostridium and salmonella.
3. Begin feeding milk replacer on day 2 and provide fresh, clean water continuously on a free-choice basis.
4. Begin feeding a calf starter recommended for full potential feeding at two days of age and offer continuously on a free-choice basis.
5. At the start of week 7, transition calves from twice per day feeding to once per day feeding of Cow's Match. This will encourage the calf to eat more calf starter and assures an effective weaning.
6. Wean only if calf is eating at least 1.5 lbs calf starter for 3 consecutive days.
7. Continue to feed appropriate full potential calf starter up to 12 weeks of age - no hay fed separately.
8. Begin feeding a calf grower recommended for full potential feeding at 12 weeks of age at the recommended rate.

CAUTION: The safety of lasalocid in unapproved species has not been established. This product is to be fed to calves only. Do not allow horses or other equines access to feeds containing lasalocid as ingestion may be fatal.

WARNING: A withdrawal period has not been established for lasalocid in pre-ruminating calves. DO NOT USE IN CALVES TO BE PROCESSED FOR VEAL. DO NOT FEED TO LACTATING COWS.

Store in cool, dry location. Do not double stack pallets of milk replacer.

"This product was made in a manufacturing facility that does not handle or store products containing animal proteins prohibited in ruminant feeds."

NOT FOR HUMAN CONSUMPTION
